Mrs. Grazyna Czyszczon

Grazyna Czyszczon is a licensed civil engineer (PE) in Illinois and Indiana with 30 years of experience performing preliminary engineering studies and preparing final construction documents for transportation projects. Her project portfolio includes bridge and highway improvements for toll roads, major and minor arterials, and local streets. Grazyna has led the design and quality-assurance aspects of many large-scale roadway improvement projects for IDOT, Illinois Tollway and CDOT. She has also overseen geometric alternative analyses and utility coordination for roadway and intersection improvement projects.

Major projects:

- I-294 Advanced ITS Assets Relocation (95th Street to Lake Street), Illinois Tollway
- IL Route 162 over I-55/70 Interchange, (IDOT) – District 8
- IL Route 2 Reconstruction (Elmwood Road to Latham Road), IDOT – District 2
- IL Route 2 and Roscoe Road, Intersection, IDOT – District 2
- IL Route 21, Roadway Reconstruction (Sanders Road to Willow Road), IDOT – District 1
- Torrence Avenue over Grand Calumet River, Bridge Replacement, IDOT– District 1
- Deerfield Road Toll Plaza and Tri-State Tollway, Roadway Improvements, Illinois Tollway

Grazyna is currently employed by Delta Engineering Group as a Senior Civil Engineer. In the past, Grazyna worked for STV Incorporated and Graef, Anhalt, Schloemer and Associates.

Grazyna graduated from Bialystok University of Technology, Bialystok, Poland with B.S. & M.S. in Civil Engineering.

Grazyna is a member of the PAEA since 1986; and served as Financial Secretary (2010 to 2015), and a Member of the Board of Directors (2015- 2019).

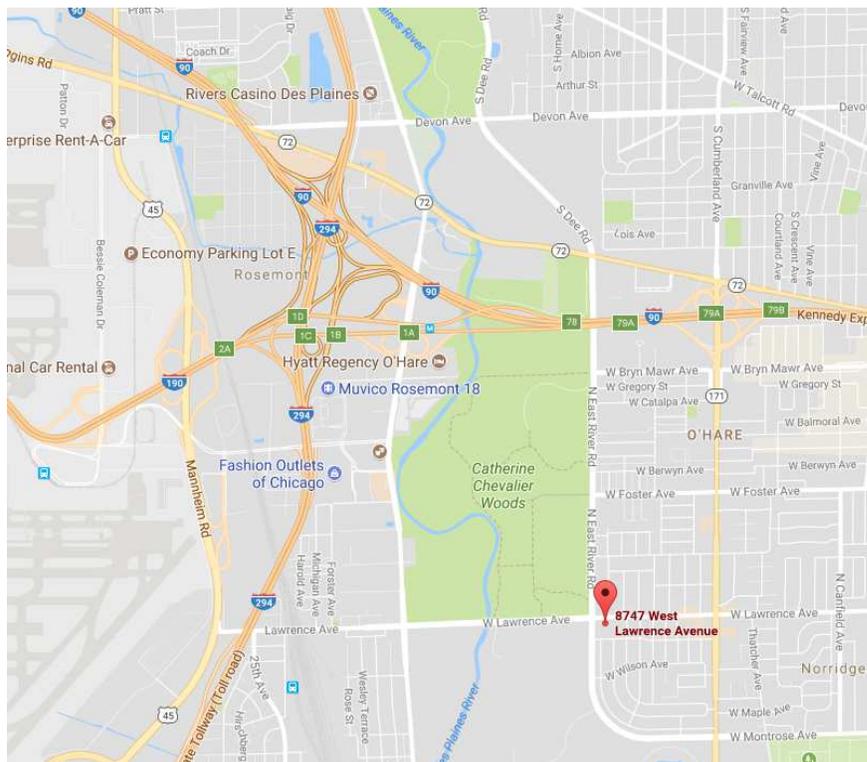

ABSTRACT

Grazyna will talk about all phases of highway design in the state of Illinois, based on her Single Point Diamond Interchange project located in southern Illinois: IL Route 162 over I-55/70 in Madison County. This single-point urban interchange is similar to a diamond interchange, but has the advantage of allowing opposing left turns onto IL-162 to proceed simultaneously, by compressing the two intersections of a diamond into one single intersection over the free-flowing interstate. To do this, the existing bridge required removal and replacement; along with raising grades, adding traffic lanes, widening sections of the road from three to five lanes, resurfacing the existing two lanes, and traffic signals and drainage system improvements.
